New features include the release of the ability to control your workspace and change the way your content is displayed. With the new Adobe Dominant workspace, you can arrange your content in different ways. This allows you to use Photoshop professionally by fixing on any page or any part of your screen. Enhance Elements shows how your changes will affect the content. Other updates focus on visual changes that are more important. You can now use a new text tool to create text and shapes in almost any language. This includes support for more than 100 languages and some of the world's most popular characters. Lastly, there's a brand new Live Paint feature, which is Photoshop's latest tool for customizing images. It is a complete customization tool that allows you to create a custom text layer, colors and fills. This feature gives you more tools in your toolbox to create more unique and creatively arranged designs in no time.
