So, it looks like Adobe's going to have a new OS X offering. But it's not the totally reimagined take-off it should be, and at least, it isn't the totally revamp. The new photoshop is coming, but like the title says, it's just an update. We encourage all website owners, designers and developers to keep app-pricing data on hand so that they can make informed decisions about their software budgeting. Feel free to include a link back to this review page in your website's web hosting company's knowledge base. What's New In Lightroom 5?

- Adobe has added support for a Non-Power Macintosh (NPM) version of the latest Mac OS X. This means that those who still use Mac OS X 10.5 or earlier should be able to take advantage of most of the features in Lightroom 5.
- Lightroom 5 also features support for the Android Google Play mobile service, making it possible to view the photos on your phone, tablet or other Android device. You can also use Lightroom 5 with syncable storage, such as apps like Dropbox.
- Lightroom 5 has a new Adobe Camera Raw interface and an updated SpeedGrade update.
- With the recent update to Lightroom 5, there's also a new adjustment sets feature.
- You can now decide whether you want to see the Lightroom menu in a window layout or in the bezier window.
- In addition to increasing the overall speed of the program, Lightroom 5 also shows the metadata instantly the first time when you open an image. This helps you quickly find images you're looking for.
- The update also opens the White Balance panel on your desktop when you click the WB control. From there, you can select a White Balance preset or leave it to its own magic.

Managing Lightroom Presets

When importing or applying Lightroom presets to your photos, it's critical to make sure you use the proper path. In previous versions of Photoshop, the preset path was the full path from the original file, including any temporary filename adjustments in the process. Recently, Lightroom introduced a new way to import or apply presets. With the new method, the path between the file and the preset file is only the filename, not the full path, making it consistent with the standard import path for all Lightroom presets.
